Data Engineer trusted with revenue-critical systems, cloud infrastructure, and AI tooling.

Python SQL Git CI/CD Airflow dbt Airbyte Snowflake Azure AWS Terraform Docker LLMs RAG

STAFF DATA ENGINEER

Join Parachute | 2025 – Present

- Own a Python rules engine that translates business rules into shipment eligibility evaluations; the tool gates ~20,000 units per week and is the system of record through which 100% of company revenue is recognized
- Manage all Azure infrastructure; introduced Terraform-based IaC for all provisioning
- Lead the company's AI initiative, covering vendor evaluation, internal LLM tooling, and centralized account management across providers
- Built an SOP bot using RAG that lets line staff query company procedures in natural language
- Established the team's engineering standards, including a programming style guide, GitHub security and CI policies, and automated testing infrastructure
- Lead workplace automation across the company, including a chatbot-driven Corrective Action Form workflow that interviews center leadership and produces required documentation

DATA ENGINEER

AMD | 2023 – 2025

- Created and managed custom pipelines using Python and SQL from various sources to data warehouse in Snowflake, orchestrated with Airflow
- Built systems to improve overall reliability and code quality of the analytics team by (1) creating the team's first programming style guide, (2) implementing best practices in CI/CD for previously manual processes, and (3) leading the team through its first testing framework
- Developed and supported new pricebook software for the embedded and adaptive team
- Maintained package for data science team to interact with the data warehouse and extended the package to interact with Salesforce, PowerBI, and mail client APIs
- Managed migration of on-prem SQL Server to Snowflake

DATA ENGINEER

Alegion | 2021 – 2023

- Built custom applications in Python for the customer success team to build automation and interact with our API, SQL database, and AWS S3
- Preprocessed and postprocessed data, worked with both relational and flat data structures including JSON, SQL, CSV, TXT, as well as image and video data
- Created a triage system for data processing tickets

EDUCATION

M.S. in Mathematics: Statistics — Texas State University | 2018 – 2021

B.S. in Mathematics — The University of Texas at Austin | 2013 – 2015

PROJECTS & PRESENTATIONS

INSPIRE — FIND YOUR INSPIRATION — 2022

github.com/ndled/inspire.ndled.us
Python: flask, cv2, celery, numpy · Digital Ocean Cloud, Docker, Redis

COMPUTER VISION APPLIED TO “SPORTS” CASTING — 2021

github.com/ndled/OWLgameplay
Python: tensorflow, cv2, numpy, pandas · Large data set, convolutional neural network

AUSTIN BIKE USAGE — 2021

github.com/ndled/AustinBikes
R: tidyverse, ggplot, e1071, lubridate, randomforest, gbm · Complex data cleaning

ELECTION MODELING — 2019

github.com/ndled/BI
R: ggplot, dplyr, tidyverse · Bayesian Inference

PRESENTATIONS

- “Ask Phill - Demoing an SOP Retrieval Bot and Exploring RAG Use Cases for Snowflake Cortex Search.” Internal tech talk, Join Parachute, March 2026.
- “Mastery of Project Based Learning for Secondary Teachers” — Co-Presenter: Jazmine Castanon. Presented at MPACT, August 2019, Manor, TX.
- “PBL Failures: When and How to Pull the Plug” — Co-Presenters: Sierra Pedroza, Jasmine Castanon. Presented at the Belton New Tech PBL Symposium, February 2017, Belton, TX.
- “#teachingsurvivors” — Co-Presenters: Jasmine Castanon, Rikki Foster. Presented at UTeach Alumni Conference, July 2016, Austin, TX.
- “Cluster analysis as a tool for qualitative research: The case of scale construction” — Co-Presenter: Dr. Cesar Delgado. Presented at the Annual Conference of the American Educational Research Association (AERA), April 2014, Philadelphia, PA.
